

### Why do you need a Kylix UK radio training system?

- Do you want a radio communications system that is designed by trainers, doesn't cost the earth and really does work?
- Are you having to bellow across the arena and consequently lose your voice after only a couple of lessons?
- Do you struggle to hear your trainer across the arena especially when the wind is blowing in the wrong direction?
- Do you want to ensure that your pupil catches every word that is said during their training session up to 130 metres away?
- Are you avoiding proper instruction during working in periods at events?
- Would you like to train riders discreetly using extremely clear high powered sound facilities during the working in period at events?
- Would you like to discreetly train several riders during working in at the same time?
- Do you want to ensure that instruction is received intelligibly ensuring the focus on the job at hand avoiding errors?
- Do you need a system that's really easy to work?
- Would you like a product that is completely backed up by a Kylix UK audio engineer?
- Would you like the flexibility of a Trainer mute switch for private conversations in-between training?
- Riders and trainers can each control the volume of the microphone and earpiece independently and in the right conditions, batteries can last up to 16 hours!

### What does the KYRTS Training System come with?

- 16 channel UHF pocket transmitter with strong belt clip
- Quality omni-directional lapel microphone
- 16 channel UHF pocket receiver with strong belt clip
- High quality earpiece with rubber ear band ensuring security at all times
- 2 x protective cases with popper belt loop
- 4 x 1.2v memory free Nickel metal hydride batteries
- Automatic drop-in battery charging station saves valuable time and the hassle of having to remove the back and batteries every time the transmitter or receiver require a charge. The charger is capable of recharging batteries within 3-4 hours
- System carry case, containing all system components detailed above

UHF pocket receiver

UHF pocket transmitter

### How many people can I train at any one time?

Kylix UK's Radio Training System ensures guaranteed communications between the trainer/rider, rider/trainer or both using up to 16 broadcast quality UHF channels!

Simply select the channel you wish to transmit and receive on and the trainer simply speaks into the lapel microphone plugged into the transmitter pack and rider listens via the receiver pack and hygienic rubber earpiece.

Charging your transmitter and receiver unit could not be easier. No need to remove the batteries. Our professional drop-in charger ensures the batteries are charged quickly and are kept in tip top condition at all times

Nothing could be simpler! For instance you could train 6 riders each on their individual channel and train each privately by selecting the channel the riders unit is set to. Up to 12 trainers and riders can privately communicate within an arena space at any one time without the risk of interference between channels.

Trainer/rider and rider/trainer communications are guaranteed at all times even at the busiest, noisiest events.

### Do I need a special licence to use the KYRTS?

The KYRTS use *license free* UHF radio technology and can be used throughout Europe without the need of any special licensing.

### What other services are offered?

- Not only do we build, supply and commission your bespoke sound system solutions but the KYRTS can be used to transmit your iPod or MP3 music from the horse to an arena sound system but controlled by you on horseback.
- As well as designing, manufacturing and installing horse exercisers, solariums, etc, Kylix UK are also specialists in the sound and can supply full arena sound systems to your specifications.
